

## Report on the Field Work in Brunei

From Sep 11 to 18, five students belong to GCOE program had been and studied in Brunei. They had studied many things together with the students from Brunei University (Universiti Brunei Darussalam). Students also saw parts of Brunei's societies and cultures, it was very good experience for students. Of course students had lectures and took field work at the Kuala Belalong Field Studies Centre (KBFSC) in the rain forest, and visited Brunei Methanol Company (BMC), the Tenaga Suria Brunei (Solar PV Plant), and Brunei Liquefied Natural Gas (BLNG) to study Brunei's situation about energies. And students also had an opportunity to discuss the research projects about new energies in Brunei and they introduced their own study to professors, lectures and students in Brunei University, and we had a good time for discussion. Thanks to all people who concerned this field work, students and me had an amazing experience. I would like to appreciate them all. Thank you.

K. Yamauchi, GCOE Specific Assistant Professor  
Graduate School of Energy Science

At the Rain Forest Center
